2.1 Traffic Data	2-7

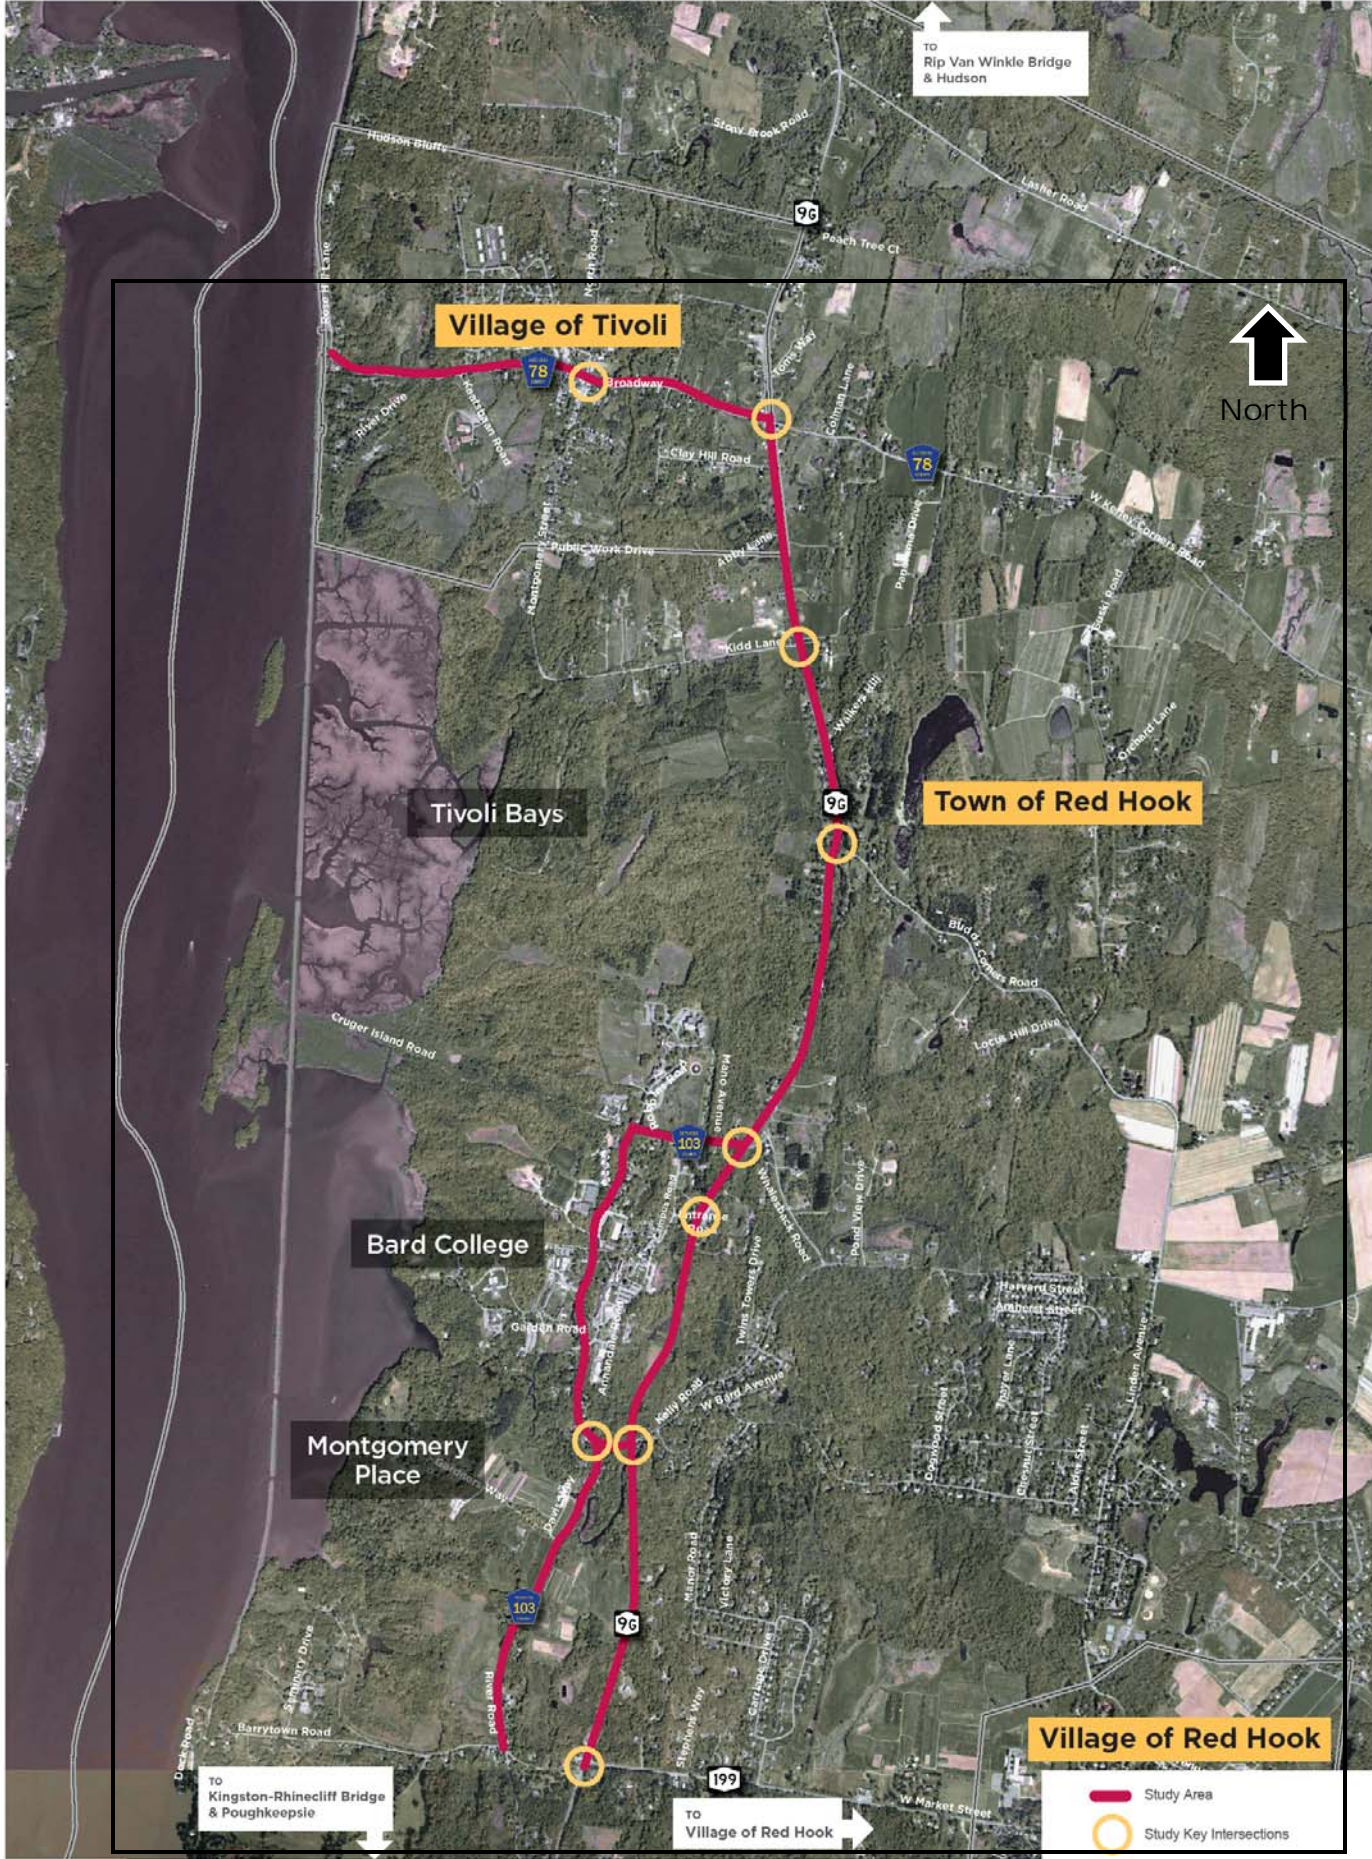

2

EXISTING CRASH DATA

2.0 Crash Data

The purpose of this task is to analyze and assess existing crash data for the study corridors as part of the overall project to produce a Corridor Management Plan (CMP) for upper NYS Route 9G, referred to as the *Upper Route 9G CMP*. The study area covers a four-mile segment of NYS Route 9G from the intersection of County Route 78 (reference marker 9G 8201 3236) south to the intersection of NYS Route 199 (reference marker 9G 8201 3203). In addition, this CMP will also evaluate overall safety and operations on two secondary corridors in the area: the section of CR 78 from the Hudson River to NYS Route 9G in Tivoli and CR 103 (Annandale Road) from NYS Route 9G to CR 82 (Barrytown Road) in Red Hook as shown in Figure 2-1.

This crash data will be further reviewed under a subsequent task to perform a safety assessment of the roadways within the project area. Under the safety assessment task (see Technical Memo #3) both short and long range recommendations to improve vehicular and non-vehicular safety and mobility will be identified. The recommendations could suggest changes to the roadway characteristics and intersection configurations, which improve safety and traffic flow for vehicles, pedestrians, bicycles and transit.

Upper Route 9G Corridor Management Plan

NYS Route 9G is a State highway that falls under the jurisdiction of the New York State Department of Transportation (NYSDOT), whereas CR 78 (Broadway/West Kerley Corners Road) and CR 103 (Annandale Road) are County roads under the jurisdiction of the Dutchess County Department of Public Works. NYS Route 9G is a two-lane, north-south roadway. According to the NYSDOT Functional Classification Viewer, the roadway is classified as a rural major collector road to the north of CR 78 (West Kerley Corners Road/Broadway) and as an urban major collector from CR 78 to Route 199 (West Market Street).

The posted speed limit on NYS Route 9G is 55 miles per hour (mph) to the south of Kelly Road and 45 mph between Kelly Road and CR 103/Old Whalesback Road. From CR 103/Old Whalesback Road to Abby Lane, the speed limit is 55 mph. From Abby Lane to a point 2,900 feet north of CR 78 (West Kerley Corners Road/Broadway) the speed is 45 mph, after which it increases to 55 mph. As shown in Figure 2-2, the Annual Average Daily Traffic (AADT) along NYS Route 9G ranges from an estimated 6,674 vehicles per day in the northern portion of the study area to approximately 9,000 in the southern portion of the study area, according to the NYSDOT Traffic Data Viewer.

Upper Route 9G Corridor Management Plan

As part of this task, historic crash data was analyzed for the five-year analysis period of January 2009 through December 2013. This crash data indicate that a total of 249 crashes occurred along the study corridors. Summaries of the crash data, including summaries filtered by location, crash type, and conditions are provided in Appendix A. Collision diagrams, which were developed on aerial photo imagery and include existing sign information, are provided in Appendix B. Details of crash histories are included in Appendix C.

A review of the crash reports revealed that 249 crashes occurred within the study area over the five year review period. The predominant crash types are collisions with animals (88 crashes, 35.3%), rear end (36 crashes, 14.5%), right angle (25 crashes, 10.0%), fixed object (23 crashes, 9.2%), run off the road (21 crashes, 8.4%), and parked vehicle (17 accidents, 6.8%). Both NYS Route 9G and CR 103 experienced significant patterns of collisions with animals, fixed object crashes, and run off the road crashes. CR 78 experienced a significant pattern of parked vehicle crashes. It was also found that a significant number of accidents occurred at night (95 accidents, 38.2%).

Regarding severity, there were 3 crashes that resulted in a fatality, 50 that resulted in injuries, 195 that resulted in property damage only and one that was classified as non-reportable. Regarding the three fatal crashes, all involved vehicles running off the road and striking fixed objects on dry surface conditions (two occurred along NYS Route 9G and one occurred along CR 103 (Annandale Road)). Two of the fatal crashes occurred on a cloudy, fall, Saturday late night/early morning at 3:37 a.m. and 1:13 a.m. with both involving alcohol and unsafe speeds. The other fatal crash was reported to have occurred on a clear, winter, Friday morning at 9:40 a.m. The contributing factor of driver inattention was cited for that crash. Since the end of the five-year analysis period, three additional fatal accidents have occurred. One crash involved two pedestrians that were struck and killed while walking along NYS Route 9G. Another involved a motorist that was struck by a box truck while making a left turn from CR 78 to NYS Route 9G. The last involved a motorist losing control on NYS Route 9G and striking a fixed object.

A review of the collision diagrams did not reveal a significant pattern of vehicle-animal crashes by location. The majority of vehicle-animal crashes occurred at night with dry surface conditions and none resulted in a fatality. The segments of the study corridor with the largest concentration of vehicle-animal crashes are:

- Route 9G between West Market Street and Kelly Road – 20 crashes
- Route 9G between Kelly Road and Entrance Road – 15 crashes
- Route 9G between Whalesback Road and Budds Corners Road – 12 crashes

Crash rates during the five-year study period were calculated for each of the roadways within the study area and compared to the statewide average crash rate for similar roadway facilities. In order to calculate the crash rates accurately, the roadway network was broken up into segments based on AADT. The crash rate comparison for these segments can be found in Table 2-1 on the next page.

Table 2-1: Crash Rates

Roadway Segment	Number of Crashes	Time Frame (Years)	Estimated AADT (Vehicles Per Day)	Segment Length (Miles)	Calculated Crash Rate (Crashes Per Million Vehicle Miles)	Statewide Average Crash Rate (Crashes Per Million Vehicle Miles)
NYS 9G from NY 199 (W Market St) to Kelly Rd	54	5	9,000	1.1	2.99	2.68
NYS 9G from Kelly Rd to CR 78 (W Kerley Corners Rd/Broadway)	136	5	6,674	3.0	3.72	2.68
NYS 9G from CR 78 (W Kerley Corners Rd/Broadway) to Stonybrook Rd	21	5	4,625	1.2	2.07	2.68
CR 103 from CR 82 (Barrytown Rd) to River Rd	3	5	1,666	1.0	0.99	2.68
CR 103 from River Rd to Cruger Island Rd	10	5	2,892	1.0	1.89	2.68
CR 103 from Cruger Island Rd to NYS 9G	3	5	1,840	0.3	2.98	2.68
CR 78 from Flora St to NYS 9G	21	5	2,258	1.1	4.63	2.68

Note: Calculated crash rates that exceeded the statewide average are shown in bold.

Within the study area, there were 9 key intersections identified as follows:

- 1) CR 78 (Broadway) at Montgomery Street/North Road
- 2) NYS Route 9G at CR 78 (West Kerley Corners Road/Broadway)
- 3) NYS Route 9G at Kidd Lane
- 4) NYS Route 9G at CR 79 (Budds Corners Road)
- 5) NYS Route 9G at CR 103 (Annandale Road/Old Whalesback Road)
- 6) NYS Route 9G at Entrance Road (Bard College)
- 7) NYS Route 9G at Kelly Road/River Road
- 8) CR 103 (Annandale Road) at River Road
- 9) NYS Route 9G at NYS Route 199 (West Market Street)

At the unsignalized intersection of *CR 78 (Broadway) at Montgomery Street/North Road*, during the five-year study period, a total of 4 crashes were reported to have occurred. There were no fatalities and 4 crashes resulted in property damage only. The only crash type was collision with a parked vehicle (4 crashes – 100%).

At the unsignalized intersection of *NYS Route 9G at CR 78 (West Kerley Corners Road/Broadway)*, during the five-year study period, a total of 18 crashes were reported to have occurred. There were no fatalities, 11 crashes resulted in personal injury and 7 crashes resulted in property damage only. The crash types with the highest incident rates were right angle (9 crashes – 50%), rear end (4 crashes – 22.2%) and left turn (2 crashes – 11.1%).

At the unsignalized intersection of *NYS Route 9G at Kidd Lane*, during the five-year study period, a total of 7 crashes were reported to have occurred. There were no fatalities and 7 crashes resulted in property damage only. The crash types with the highest incident rates were run off the road (2 crashes – 28.6%),

Upper Route 9G Corridor Management Plan

rear end (2 crashes – 28.6%), collision with a fixed object (1 crash – 14.3%) and collision with an animal (1 crash – 14.3%).

At the unsignalized intersection of *NYS Route 9G at CR 79 (Budds Corners Road)*, during the five-year study period, a total of 7 crashes were reported to have occurred. There were no fatalities, 2 crashes resulted in personal injury and 5 crashes resulted in property damage only. The crash types with the highest incident rates were rear end (4 crashes – 57.1%), right turn (1 crashes – 14.3%) and collision with an animal (1 crash – 14.3%).

At the unsignalized intersection of *NYS Route 9G at CR 103 (Annandale Road)/Old Whalesback Road*, during the five-year study period, a total of 17 crashes were reported to have occurred. There were no fatalities, 4 crashes resulted in personal injury and 13 crashes resulted in property damage only. The crash types with the highest incident rates were right angle (8 crashes – 47.1%), collision with an animal (3 crash – 17.6%), rear end (2 crashes – 11.8%), and other (2 crashes – 11.8%).

At the unsignalized intersection of *NYS Route 9G at Entrance Road (Bard College)*, during the five-year study period, a total of 5 crashes were reported to have occurred. There were no fatalities, 1 crash resulted in personal injury and 4 crashes resulted in property damage only. The crash types were rear end, overtaking, right angle, collision with a fixed object and collision with an animal with one crash for each type – 20%.

At the signalized intersection of *NYS Route 9G at Kelly Road/River Road*, during the five-year study period, a total of 20 crashes were reported to have occurred. There were no fatalities, 2 crashes resulted in personal injury and 18 crashes resulted in property damage only. The crash types with the highest incident rates were rear end (11 crashes – 55%) and left turn (6 crashes – 30%).

At the unsignalized intersection of *CR 103 (Annandale Road) at River Road*, during the five-year study period, a total of 2 crashes were reported to have occurred. There were no fatalities, 2 crashes resulted in property damage only. The crash types were a right turn and a head on, each with one crash – 50%.

At the signalized intersection of *NYS Route 9G at NYS Route 199 (West Market Street)*, during the five-year study period, a total of 8 crashes were reported to have occurred. There were no fatalities, 3 crashes resulted in personal injury and 5 crashes resulted in property damage only. The crash types with the highest incident rates were rear end (4 crashes – 50%), followed by collision with a fixed object, head on, run off the road and other, with one crash for each type – 12.5%.

Once again, this crash data will be further reviewed under a subsequent task to perform a safety assessment of the project corridors. Technical Memo #3 summarizes the safety assessment process and results which included both short and long range recommendations to improve vehicular and non-vehicular safety and mobility.

2.1 Traffic Data

For a detailed description of current traffic conditions on the study roadways, please see Technical Memorandum 1. As indicated in Tech Memo 1, all 3 roads studied are two-lane roadways where passing is prohibited (except for certain sections of NYS 9G). Daily traffic volumes on NYS 9G were measured at between 4,800 and 9,000 vehicles. On CR 103, daily traffic volumes were measured at between 1,600 and 3,000, while on CR 78, daily traffic volumes were measured at between 200 and 2,300. Peak-hour

Upper Route 9G Corridor Management Plan

intersection operating conditions (where counted traffic volumes are compared to intersection capacities and which are rated on a scale from A to F, with A being the best and F being the worst) were determined to be at the best (A) level on CR 103 and CR 78, while on NYS 9G, they were determined to be at a relatively good (C) level. The posted speed limit on NYS 9G varies in the study area between 45 and 55 mph, while operating speeds (85th percentile) were documented at between 55 and 60 mph. The posted speed limit on CR 103 varies in the study area between 25 and 40 mph, while operating speeds were documented at between 30 and 49 mph. The posted speed limit on CR 78 varies in the study area between 25 and 30 mph, while operating speeds were documented at between 40 and 43 mph. It is worthy of note that some of the speed limits in the area have recently been reduced and that the accident and operating speed data precede these changes.

APPENDIX A
Crash Data Summaries
